

# New Transit Fleet Maintenance Facility (TFMF)

## Progress Update

### February 2018

We are now 90% through the design of the new facility and looking forward to adding the final touches and completing the design over the coming weeks.

Through stage one of the procurement process we have pre-qualified five General Contractors to construct the TFMF and following the completion of the overall design we will further evaluate the five Contractors before appointing one to construct the new facility.

Over the coming weeks and prior to the start of any Construction activities we will be prioritizing areas such as safe access and egress and staff parking to ensure we minimise any disruptions to the present staff and ongoing operations of the facility.

The future weeks will also involve

- Regular team meetings and stakeholder engagement
- Ongoing design evaluations
- Site planning and Construction phasing reviews
- Completion of Building Systems design
- Pre-qualified Contractor review and selection
- Confirmation of fixtures and fittings
- Final code reviews
- Budget analysis

### Schedule Overview

- Design Completion – April 2018
- Construction Start – Spring 2018
- Completion - Fall / Winter 2019
